

LAST SEEN:
LOITERING IN SINKS
AND DRAINS

WANTED FOR:
CAUSING SEWER
OVERFLOWS
AND BACK-UPS

Beware of the Grease Goblin

- Never pour grease down sinks, drains or into toilets.
- Grease can clog pipes and cause sewer overflows and back-ups into basements, yards, and storm drains.
- Grease overflows and back-ups pose potential health risks and environmental problems that can be costly to clean up.

Solutions to the Grease Goblin

Once cooled, pour cooking oils and grease into a non-recyclable container. Add kitty litter or coffee grounds, seal the container and place in the trash.

Scrape food scraps from dishes into trash. Minimize the use of your garbage disposal because even cooked food contains oil and grease that can clog sewer lines.

Remove oil and grease from dishes, pots, and pans with a paper towel or napkin.

Pre-wash dishes, pans, and pots with **cold** water before putting them in the dishwasher. Hot water does not remove oil or grease but rather liquefy them. Once cool they return to a solid and can clog sewer lines.

Cover kitchen sink with a strainer and empty into trash as needed.

*More Solutions to
The Grease Goblin*

- Reuse cooking oil as often as possible. Store used cooking oil in the freezer to minimize odors.
- Recycle large quantities of used cooking oil. Check the phone book under “recyclers” or “rendering companies.”

**Help keep the Grease Goblin out of your
drains and in the hands of the proper authorities!**
